

Welcome to the CIT's Data Cell !

# A STEP INTO DATA WORLD

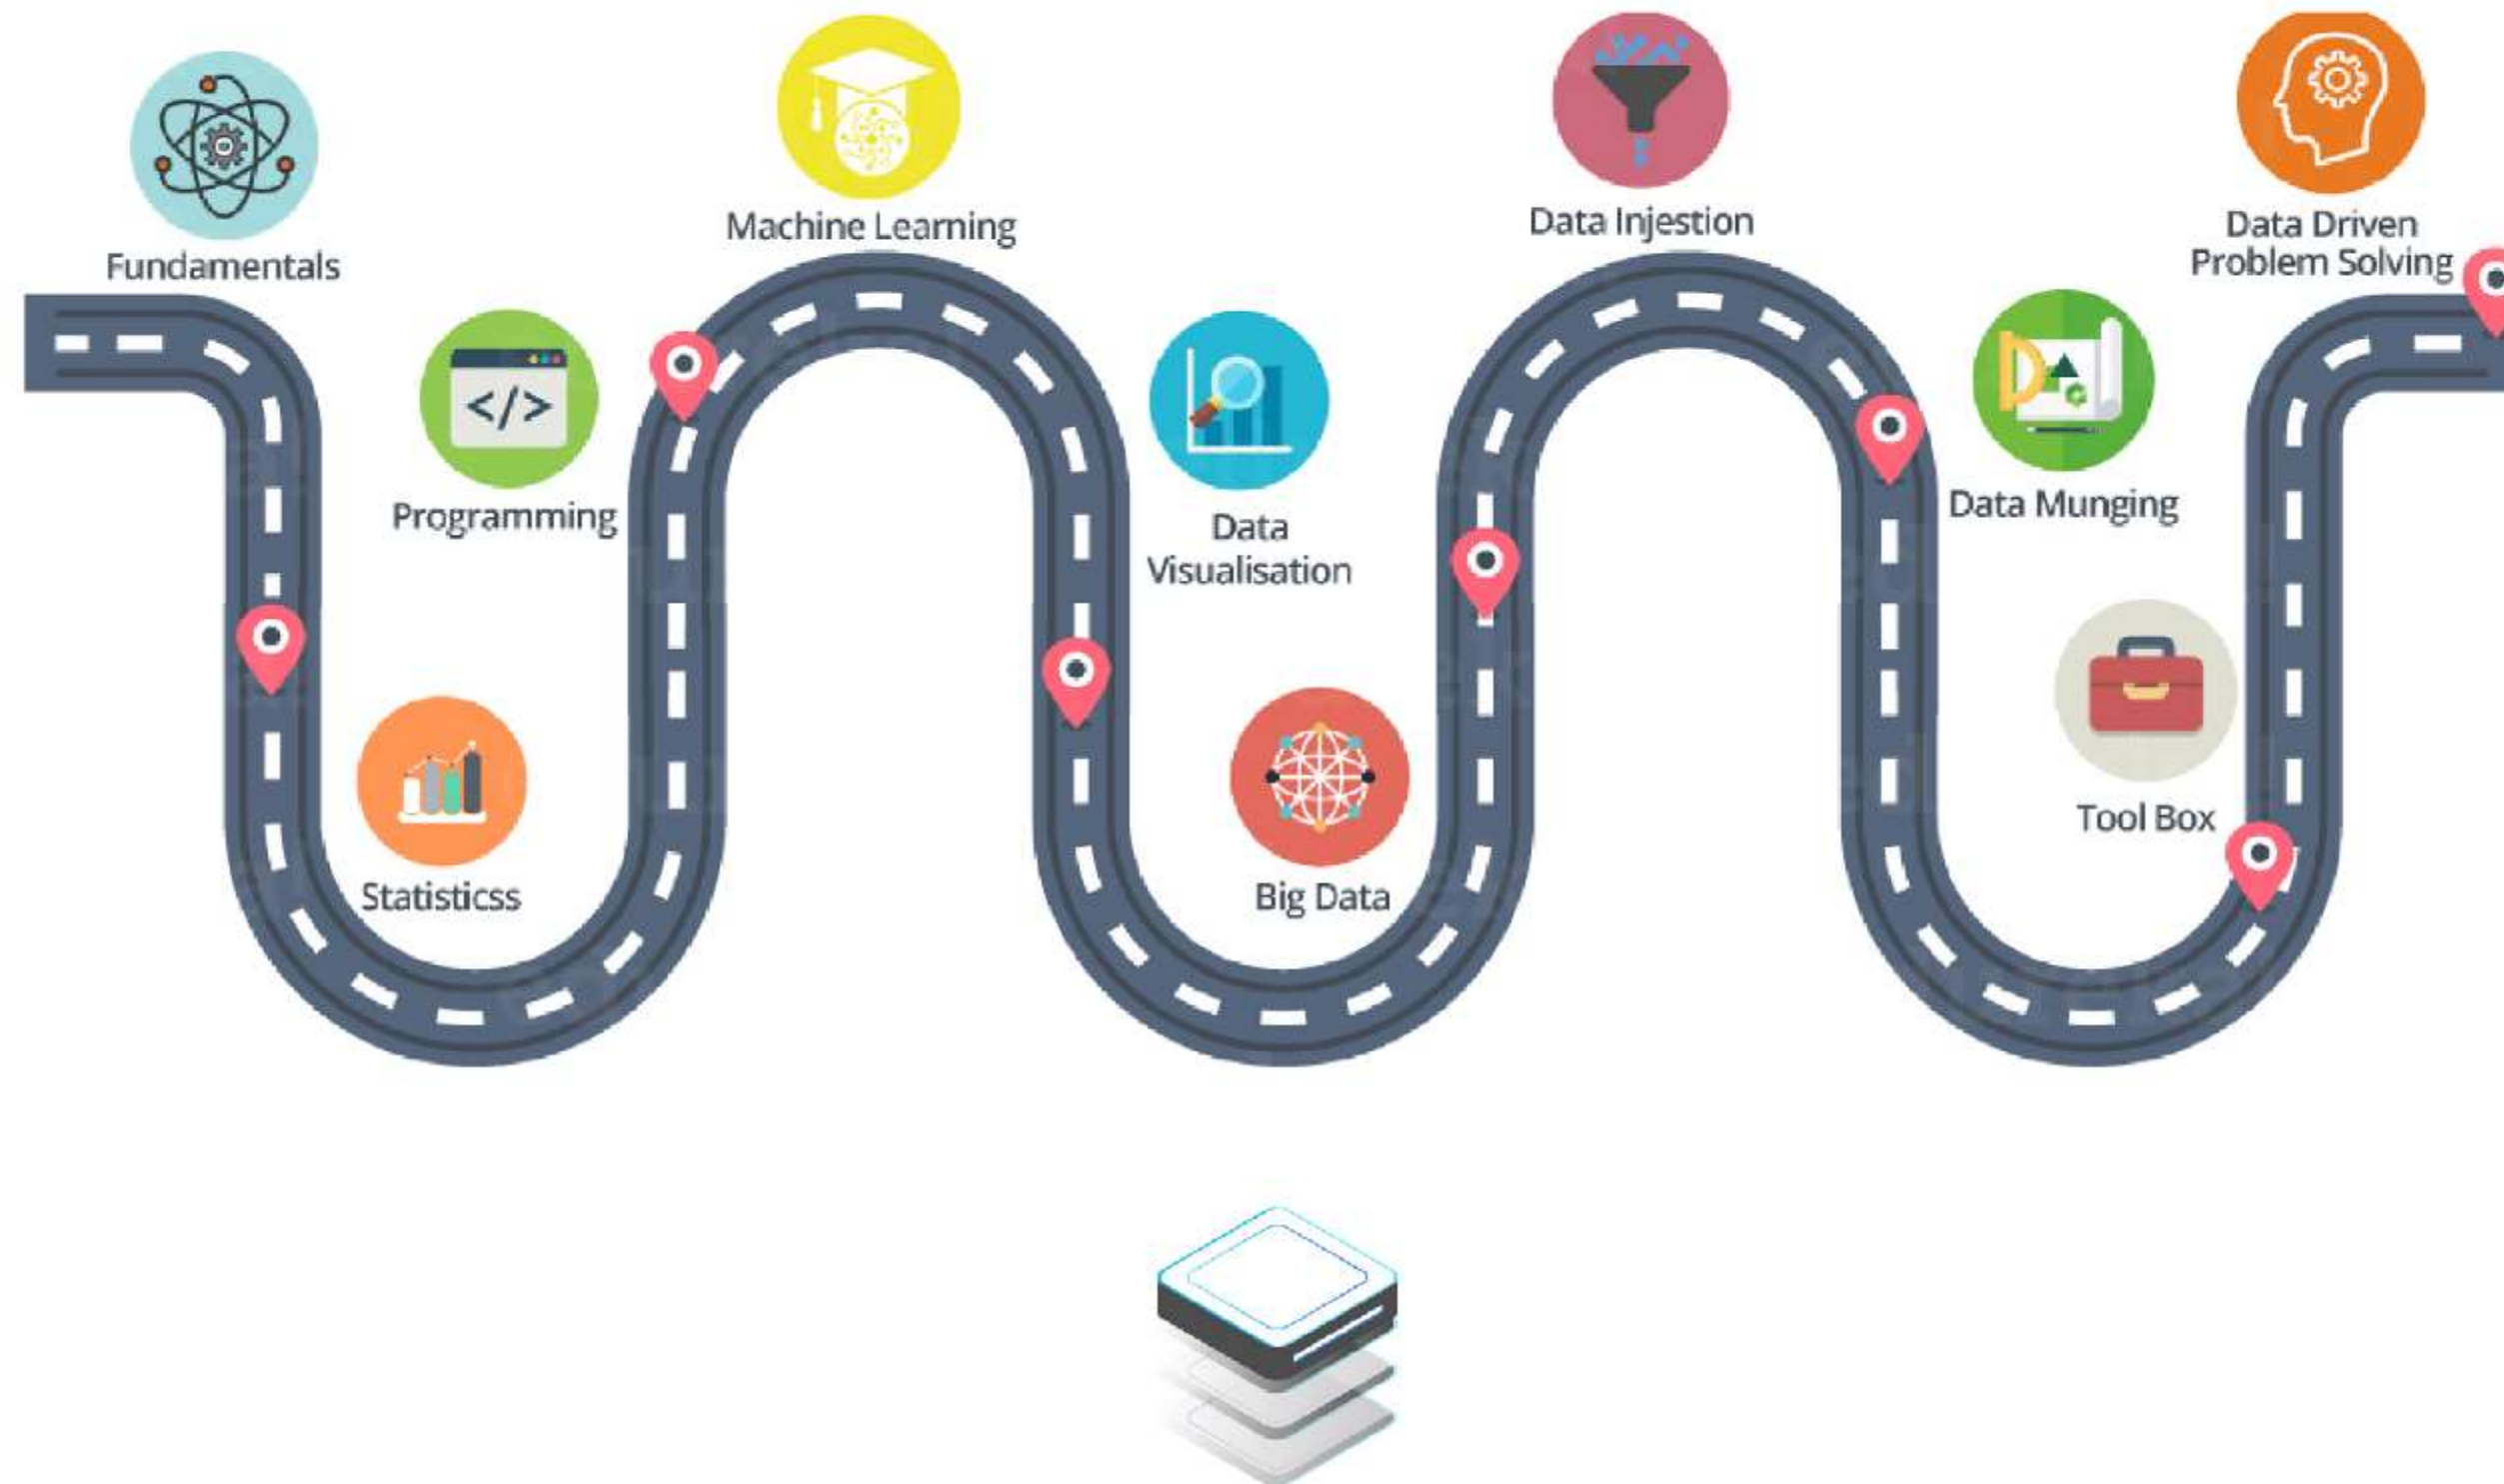

Club Informatique & Télécom  
Data Cell

# Data Engineer

Collection + Integration	 <b>rudderstack</b>	 <b>JITSU</b>	 <b>Airbyte</b>	 <b>SNOWFLOW</b>	 <b>nifi</b>	
Warehousing	 (Formerly PrestoSQL)			 <b>druid</b>	 ClickHouse	
Transformation	 <b>dbt</b>		 <b>PREFECT</b>	 <b>beam</b>	 <b>Flink</b>	 DAGSTER
Data Cataloging	 <b>Amundsen</b>					
Analysis	 <b>Metabase</b>	 <b>Lightdash</b>	 <b>Superset</b>		 <b>PostHog</b>	
	 <b>re dash</b>	 <b>Plausible</b>	 <b>Querybook</b>			

# Data Scientist & Analyst

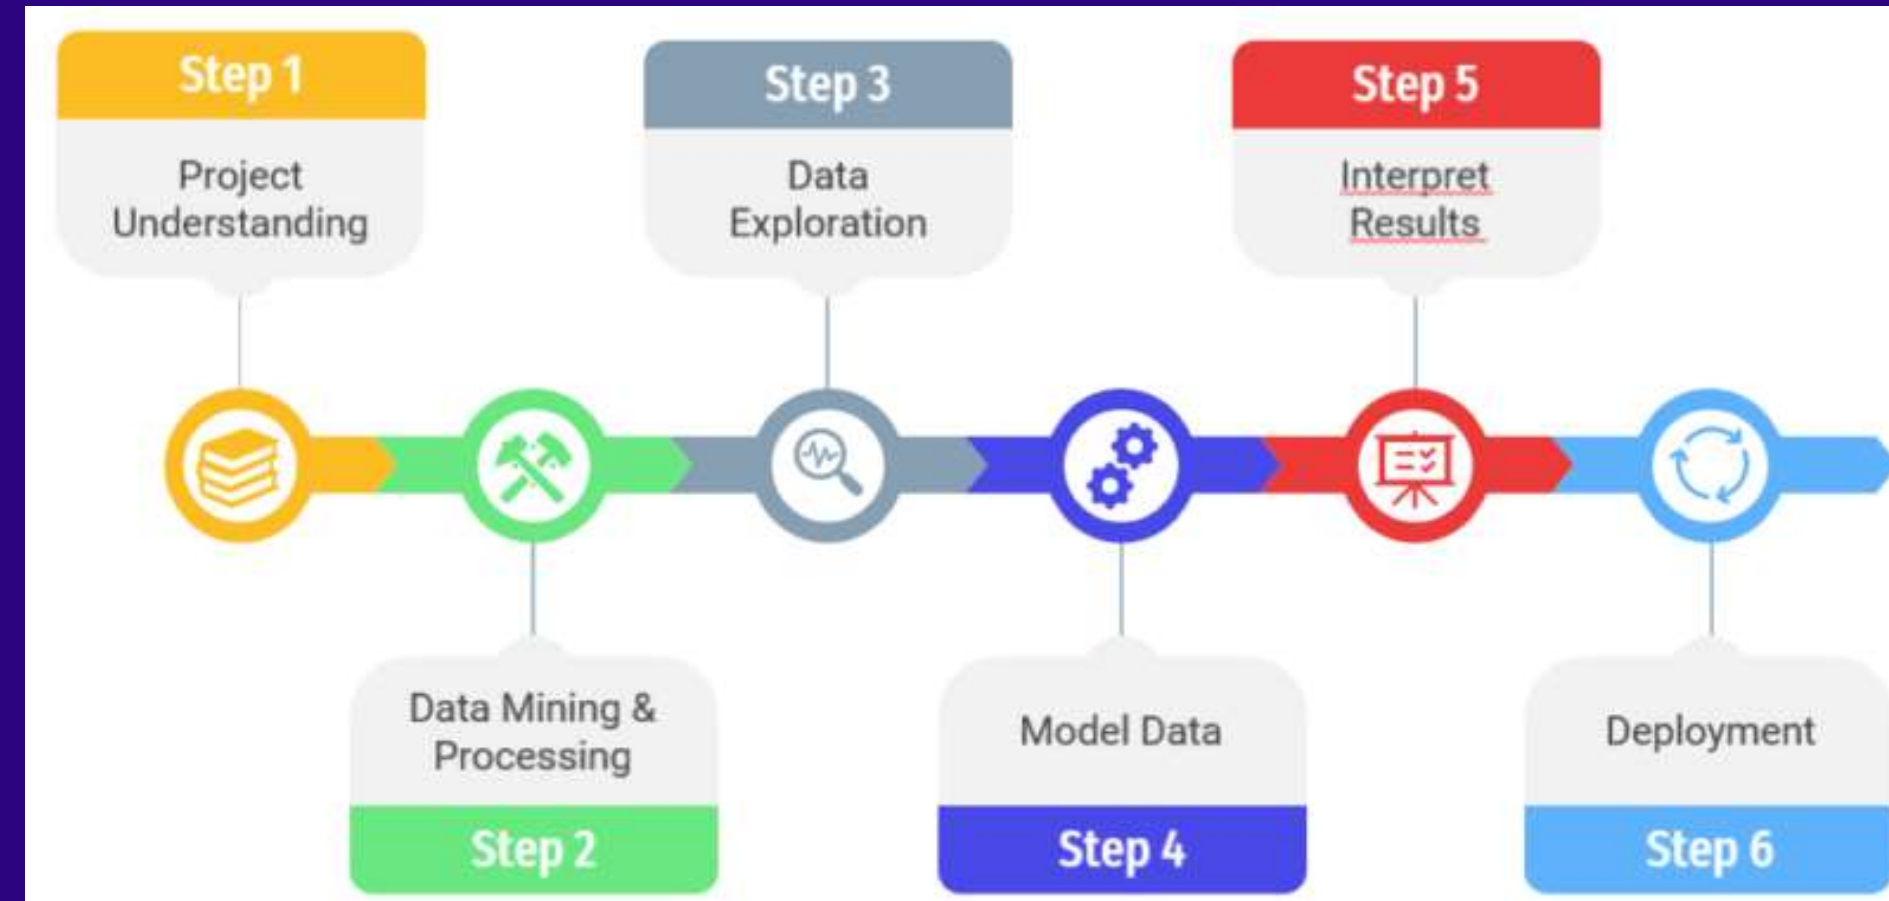

## SOME DATA SOURCES :

- Kaggle
- UCI Machine Learning Repository
- Google Dataset Search
- Data.gov
- ...

# DS project steps

- Understand goals
- Get data
- Understand data
- Build ML models
- Deploy

# Step 1: Define the Problem

What Question are we trying to answer ?

- Will customers buy this product?
- Which patients are at risk??
- How many cars will be rented tomorrow ?

# Step 2: Clean & Prepare the Data

- Handle missing values
- Remove duplicates/errors
- Create useful features (feature eng)

# Step 3: Explore the Data (EDA)

- Use statistics and visualizations
- Look for patterns, outliers, trends..
- Create useful features (feature eng)

# Step 4: Build the Model

- Choose an algorithm
- Train it on train data
- Test it on unseen data

# Step 5 : Evaluate

- Check accuracy, other metrics..
- Deploy the model IRL(app,dashboard...)
- Monitor and improve over time

# Presenting our partner

Ready, Set, Code!
